CREATING A SENSE OF SECURITY

The Revolution in Real Time Patrol Monitoring

The First Patrol System in the World Combining 3 Functions in 1 Device:

Guard Tour – The Active Guard Patrol System enables full monitoring of mobile worker time and attendance in Real Time. All data is transmitted through GSM networks.

Lone Worker – The PANIC button allows immediate communication with the control room in case of emergency tremendously improving the security of your employees.

Radio – The control room can also keep Two Way Voice Communication with employees in order to reassure them that assistance is at hand.

CREATING A SENSE OF SECURITY

2 Way Voice Communication

- Active Guard users cannot make a call to the control room although they can let the operator know they need voice connection by pressing “call me” button.
- The monitoring station operator (and pre-programmed preset numbers) can call Active Guard handsets anytime using the built in GSM phone technology.
- Each Active Guard unit is programmed to answer calls only from defined phone numbers.
- Direct calls from Active Guard are blocked.
